Wednesday 8 January 2020

Afternoon (Time: 1 hour 45 minutes)

Paper Reference **WBI14/01**

Biology

International Advanced Subsidiary / Advanced Level

Unit 4: Energy, Environment, Microbiology and Immunity

You must have:

Scientific calculator, ruler, HB pencil

Total Marks

Instructions

- Use **black** ink or **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- **Show all your working in calculations and include units where appropriate.**

Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- In questions marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

Answer ALL questions.

Write your answers in the spaces provided.

Some questions must be answered with a cross . If you change your mind about an answer, put a line through the box and then mark your new answer with a cross .

- 1 The diagram shows some processes linking photosynthesis to productivity and the distribution of biomass in the trees in a forest.

- (a) Complete the diagram by writing the appropriate word or words in box **A** and in box **B**. (1)

(b) In a healthy forest ecosystem, the NPP should be distributed equally to the leaves, wood and roots.

(i) State the meaning of the term **ecosystem**.

(1)

(ii) Which of the following are the units for NPP?

(1)

- A $\text{kg m}^{-1} \text{yr}^{-1}$
- B $\text{kg m}^{-2} \text{yr}^{-2}$
- C $\text{kJ m}^{-1} \text{yr}^{-1}$
- D $\text{kJ m}^{-2} \text{yr}^{-1}$

(iii) In this forest, the total NPP was 11 700 units.

The leaves contained 34% of the NPP and the wood contained 39% of the NPP.

Calculate the NPP content in the roots.

(2)

Answer units

(Total for Question 1 = 5 marks)

2 Plastics are carbon-based polymers made from repeating monomers.

Many plastics do not break down naturally and their disposal is causing a lot of damage to the environment.

(a) Plastics have been around for about 70 years.

Scientists think that microorganisms could evolve the ability to break down plastics to obtain nutrients.

(i) Explain why scientists think that plastics could be broken down by microorganisms. (2)

.....

.....

.....

.....

.....

.....

(b) Some bacteria have been discovered that can break down one type of plastic, the polymer polyethylene terephthalate (PET).

This polymer is made from the monomer ethylene terephthalate (MET).

The diagram shows how PET can be broken down.

Which row of the table describes reaction 1 and reaction 2?

(1)

	Reaction 1	Reaction 2
<input type="checkbox"/> A	condensation	condensation
<input type="checkbox"/> B	condensation	hydrolysis
<input type="checkbox"/> C	hydrolysis	condensation
<input type="checkbox"/> D	hydrolysis	hydrolysis

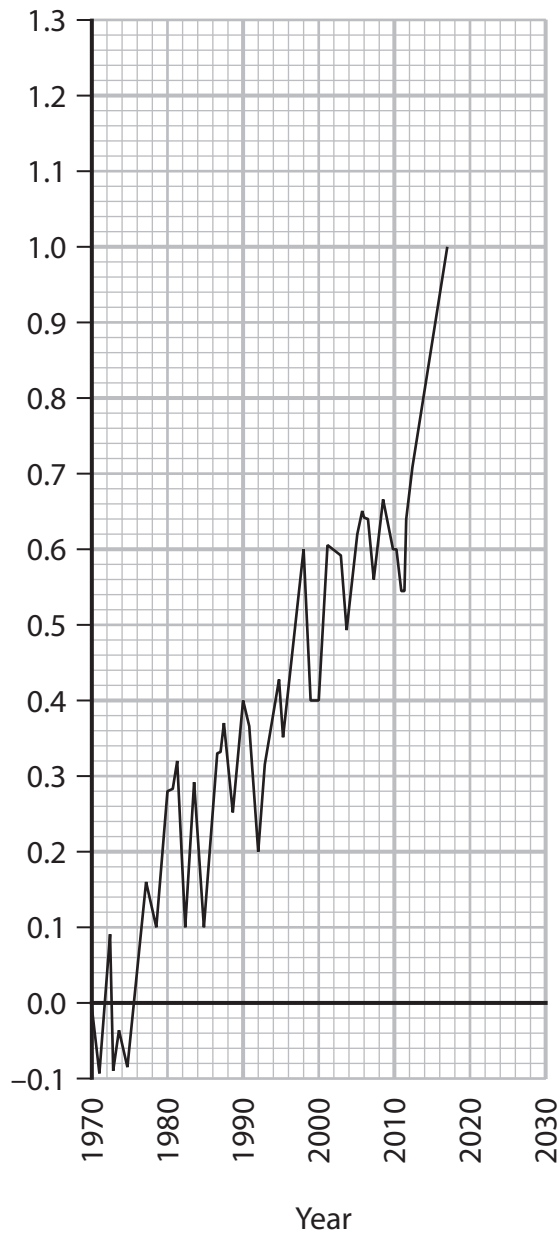

(Total for Question 2 = 6 marks)

3 The graph shows the changes in mean temperature of the surface of the Earth from 1970 to 2017.

Change in mean temperature of the surface of the Earth / °C

(a) Which of the following gases could be responsible for these temperature changes? (1)

- A carbon dioxide and methane
- B carbon dioxide and oxygen
- C carbon dioxide, methane and oxygen
- D methane and oxygen

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(b) What is the estimated change in the mean temperature of the surface of the Earth in 2030?

(1)

- A 1.3
- B 1.1
- C 0.8
- D 0.2

(c) Ultraviolet light has a shorter wavelength than infrared radiation.

Which row of the table describes the passage of ultraviolet light and infrared radiation, reflected from the surface of the Earth, through gases in the atmosphere?

(1)

	Ultraviolet light	Infrared radiation
<input type="checkbox"/> A	passes through	passes through
<input type="checkbox"/> B	passes through	does not pass through
<input type="checkbox"/> C	does not pass through	passes through
<input type="checkbox"/> D	does not pass through	does not pass through

(d) Studying the width of tree rings provides evidence for climate change.

(i) Which of the following involves the study of tree rings?

(1)

- A dendrochronology
- B entomology
- C epigenetics
- D proteomics

(ii) Explain why the width of tree rings produced in 1970 would be different from the width of tree rings produced in 2010.

4 Malaysia is covered by large areas of rainforest. These rainforests have one of the highest biodiversities in the world.

However, the rate of loss of rainforest in Malaysia is one of the highest in the world.

(a) (i) From 2000 to 2012, Malaysia lost 14.4% of its rainforest. This is equivalent to 47 278 km².

Calculate the area of Malaysia covered by rainforest in 2000.

Give your answer in standard form.

(3)

Answer km²

(ii) A decrease in the area covered by rainforest results in both a decrease in biodiversity and a decrease in populations.

Explain why a decrease in the area covered by rainforest reduces both biodiversity and populations within the rainforest.

(2)

.....

.....

.....

.....

.....

.....

(b) The diagram shows an Oriental blue clearwing, a species of moth found in the rainforests of Malaysia.

Magnification $\times 5$

The Oriental blue clearwing has blue bands on its body. It resembles a bee by having transparent wings and fur on its body. It drinks in puddles of water where a number of species of bee also drink.

(i) Explain which examples of adaptation are illustrated by this moth. (2)

.....

.....

.....

.....

.....

.....

(ii) Suggest **two** advantages to the Oriental blue clearwing of resembling bees.

(2)

.....

.....

.....

.....

.....

.....

(iii) This moth was seen and a specimen collected in 1887. It was not seen again in the rainforests of Malaysia until 2017.

The DNA of these recently rediscovered Oriental blue clearwings was compared with the DNA of the moth collected in 1887.

Describe how this comparison could be made.

6 The photograph shows barnacles attached to a rock on a seashore.

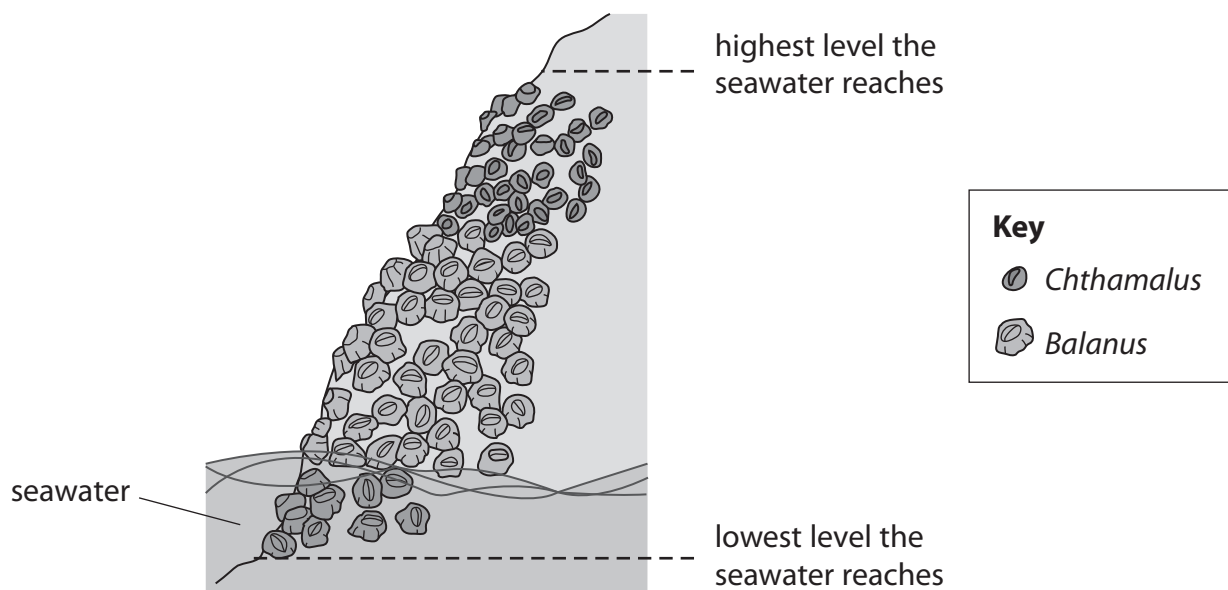

© FLPA/Alamy Stock Photo

The list gives some facts about barnacles:

- barnacles are marine animals that live inside their shells
- the shells are permanently attached to a solid surface
- barnacles feed on food particles that they filter from the water
- barnacles reproduce sexually and produce larvae that swim in the seawater
- larvae settle on suitable surfaces such as rocks.

(a) The diagram shows the distribution of two types of barnacle, *Chthamalus* and *Balanus*, on a rock.

These two types of barnacle occupy different niches.

Explain how the distribution and abundance of these two types of barnacle on this rock show that these barnacles occupy different niches.

(3)

.....

.....

.....

.....

.....

.....

.....

.....

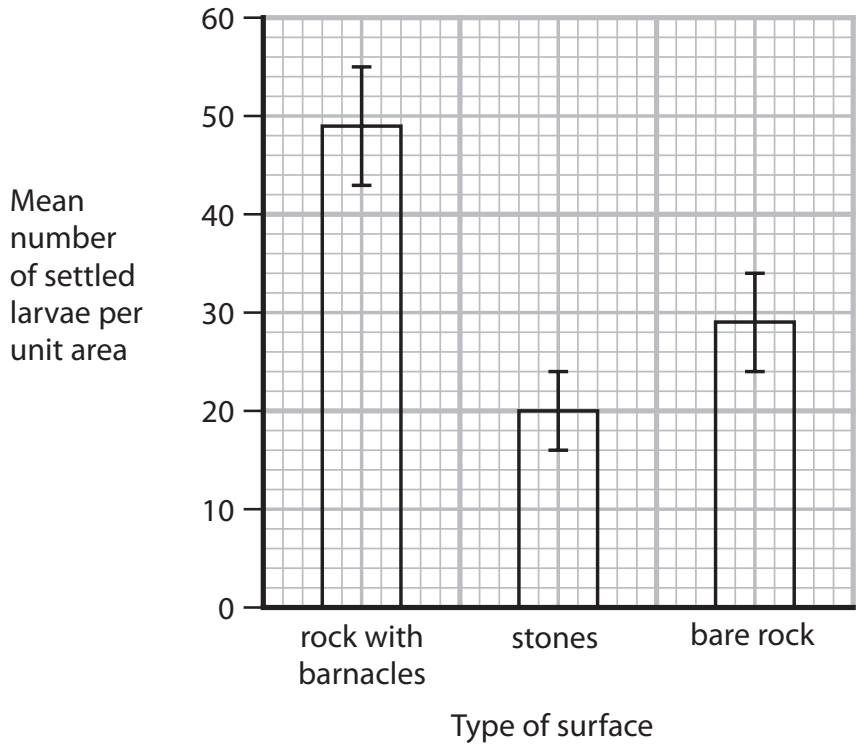

.....

.....

(b) The types of surface that the larvae settled on were studied.

The graph shows the results of this study.

(i) Comment on the reliability of the conclusions that can be drawn from this study.

(b) Immunotherapy, using genetically-modified T cells, is being developed to treat blood cell cancers.

Cancer cells have a specific antigen on their surface.

The T cells have to possess a receptor (CAR) on their surface that binds to this antigen.

A gene coding for CAR has to be inserted into the T cells. These genetically-modified T cells are called CAR-T cells.

The diagram shows some steps in this procedure.

(i) The virus used in this procedure is modified so that it is not pathogenic.

Which virus would be suitable to use in **Step 2**?

(1)

- A** Ebola virus
- B** human immunodeficiency virus (HIV)
- C** lambda phage (λ phage)
- D** tobacco mosaic virus (TMV)

(ii) Explain why the CAR gene is inserted into the T cells in **Step 3**.

(2)

.....

.....

.....

.....

.....

.....

.....

(iii) Explain the importance of mitosis in the replication of the CAR-T cells in **Step 4**.

9 The growth of microorganisms can be studied using optical methods (turbidity).

The number of cells in 1 cm^3 of a culture can be estimated by using a photometer to measure the optical density of the culture.

Light is shone through a sample of the culture and a detector records the optical density.

The more light absorbed by the culture, the higher the optical density.

The diagram shows what happens to light shone at a culture of microorganisms.

The number of cells in the sample is determined using a calibration curve.

The graph shows a calibration curve for bacterial cells and yeast cells.

The photographs show bacterial cells and yeast cells, as seen using a light microscope.
