International GCSE (9–1)

Wednesday 20 May 2020

Afternoon (Time: 2 hours)

Paper Reference **4PH1/1P 4SD0/1P**

Physics

Unit: 4PH1

Science (Double Award) /4SD0

Paper: 1P

You must have:
Ruler, calculator

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions **in the spaces provided** – *there may be more space than you need.*
- Show all the steps in any calculations and state the units.

Information

- The total mark for this paper is 110.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Write your answers neatly and in good English.
- Try to answer every question.
- Check your answers if you have time at the end.

FORMULAE

You may find the following formulae useful.

energy transferred = current \times voltage \times time

$$E = I \times V \times t$$

$$\text{frequency} = \frac{1}{\text{time period}}$$

$$f = \frac{1}{T}$$

$$\text{power} = \frac{\text{work done}}{\text{time taken}}$$

$$P = \frac{W}{t}$$

$$\text{power} = \frac{\text{energy transferred}}{\text{time taken}}$$

$$P = \frac{W}{t}$$

$$\text{orbital speed} = \frac{2\pi \times \text{orbital radius}}{\text{time period}}$$

$$v = \frac{2 \times \pi \times r}{T}$$

(final speed)² = (initial speed)² + (2 \times acceleration \times distance moved)

$$v^2 = u^2 + (2 \times a \times s)$$

pressure \times volume = constant

$$p_1 \times V_1 = p_2 \times V_2$$

$$\frac{\text{pressure}}{\text{temperature}} = \text{constant}$$

$$\frac{p_1}{T_1} = \frac{p_2}{T_2}$$

Where necessary, assume the acceleration of free fall, $g = 10 \text{ m/s}^2$.

Answer ALL questions.

1 This question is about wave behaviour.

(a) The boxes give three types of wave behaviour and the diagrams give three examples of wave behaviour.

Draw one straight line from each wave behaviour to the example that best shows that behaviour.

(3)

Wave behaviour

total internal reflection

refraction

2 This question is about the movement of a train.

The diagram shows the train on a track.

The train starts braking at point P and stops moving at point Q.

The graph shows how the train's velocity changes with time as the train travels from P to Q.

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(a) Calculate the acceleration of the train.

(3)

acceleration = m/s²

(b) Calculate the distance travelled by the train from P to Q.

(3)

distance = m

(c) Draw a line on the graph to show how the train's velocity will change if its initial velocity is the same but the braking force is lower.

4 (a) (i) State Hooke's Law.

(2)

.....

.....

.....

.....

(ii) The graph shows how the extension of a rubber band varies with the force applied.

Explain how the graph shows that the rubber band does not obey Hooke's Law.

(2)

.....

.....

.....

.....

.....

.....

Turn over

(b) Diagram 1 shows a model aeroplane powered by a rubber band.

Diagram 1

A person rotates the propeller of the model aeroplane, which twists the rubber band.

He then releases the propeller and it spins.

Energy transfer occurs during this process.

The box lists words associated with energy.

kinetic	gravitational	electrostatic
mechanical	elastic	magnetic
heating	chemical	radiation

Use words from the box to complete the passage.

(3)

The person does work to twist the rubber band.

As the person twists the rubber band it extends, increasing the

energy store of the rubber band. When the rubber band is released it does mechanical work,

increasing the energy store of the propeller.

(c) Diagram 2 shows the aeroplane flying horizontally to the right.

Diagram 2

The aeroplane flies at a constant speed.

Diagram 2 shows two forces acting on the aeroplane.

Draw labelled arrows on diagram 2 to show two more forces acting on the aeroplane. (4)

5 A student does an investigation to determine the current-voltage graph for an unknown component, X.

The student uses this equipment

- component X
- cell
- variable resistor
- ammeter
- voltmeter
- connecting wires

(a) Complete the circuit diagram to show how the student should set up this equipment for her investigation.

(4)

(b) The student completes her investigation.

The table shows her results.

Voltage in V	Current in mA
0.00	0
0.10	0
0.20	0
0.30	0
0.40	0
0.50	2
0.60	8
0.70	33
0.80	140

(i) Plot a graph of the student's results on the grid.

Plot current on the y-axis and voltage on the x-axis.

(3)

(ii) Draw a curve of best fit.

7 This is a question about Io, a moon of Jupiter.

The diagram shows two jets of gas from volcanoes on Io.

One jet of gas is from the volcano Prometheus and the other is from the volcano Tvashtar.

- (a) Gas particles in the Prometheus jet leave the surface of Io and move vertically upwards. The particles reach their maximum height when their speed is zero. Some particles in the Prometheus jet reach a maximum height of 92 km. Calculate the initial speed of these particles as they leave the surface of Io.

[acceleration due to gravity on Io = 1.8 m/s^2]

(3)

initial speed = m/s

(b) Before the gas particles leave the surface of Io, they are trapped in a chamber.

(i) Explain how the gas particles exert a pressure on the walls of the chamber. (3)

.....

.....

.....

.....

.....

.....

(ii) The Tvashtar chamber has the same volume as the Prometheus chamber and contains the same number of molecules of the same type of gas.

The temperature of the gas in the Prometheus chamber is 1200 K.

The temperature of the gas in the Tvashtar chamber is 1600 K.

The pressure of the gas in the Prometheus chamber is 8.2 kPa.

Calculate the pressure of the gas in the Tvashtar chamber.

(3)

pressure = kPa

(iii) Explain why the pressure inside the chambers increases when the temperature increases.

Use ideas about particles in your answer.

(3)

.....

.....

.....

.....

.....

.....

(iv) Explain why the particles from the Tvashtar chamber reach a greater maximum height than the particles from the Prometheus chamber.

8 This question is about atmospheric optical illusions.

- (a) A mirage is an optical illusion formed due to total internal reflection of light from the sky at the boundary between cold air and hot air.

Diagram 1 shows how a mirage is formed.

not to scale

Diagram 1

- (i) State the formula linking critical angle and refractive index. (1)

- (ii) The critical angle of the cold air at the boundary is 88.500°
 Calculate the refractive index of the cold air.
 Give your answer to 5 significant figures. (3)

refractive index =

(b) (i) Diagram 2 shows a ray of light from the Sun.

The refractive index of the atmosphere is greater than the refractive index of space.

Complete the diagram by drawing the path of the ray of light through the atmosphere. (2)

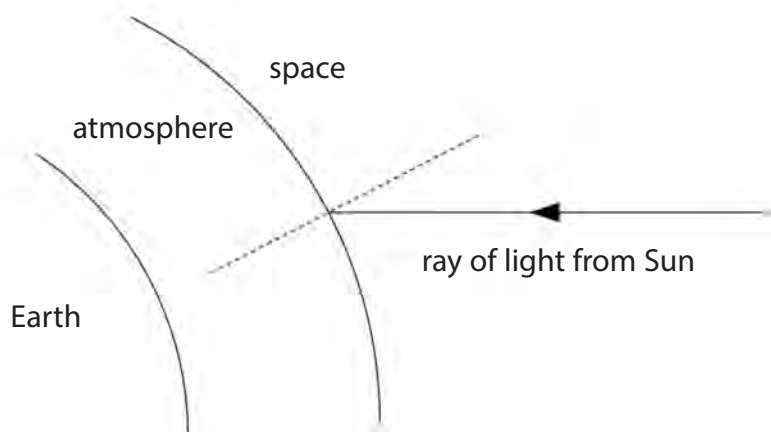

Diagram 2

(ii) Diagram 3 shows a ray of light from the Sun when the Sun is directly overhead.

Diagram 3

Explain why the ray of light does not change direction when it enters the atmosphere. (2)

.....

.....

.....

.....

(iii) Explain why the wavelength of the light reduces when it enters the atmosphere. (2)

.....

.....

.....

(iv) Suggest why the Sun appears not to be circular when it is close to the horizon at sunset. (1)

9 This question is about a radio powered by a person turning a handle.
The radio has a battery which stores energy when the handle is turned.

(a) The diagram shows the part of the radio called a generator.

The generator produces a voltage which does electrical work on the battery.

Explain how the generator produces a voltage.

(3)

.....

.....

.....

.....

.....

.....

(b) The radio receives a radio wave of frequency 93 MHz.

(i) State the formula linking speed, frequency and wavelength of a wave. (1)

(ii) Calculate the wavelength of the radio wave.

[speed of radio waves = 3.0×10^8 m/s] (3)

wavelength = m

(c) The signal received by the radio is converted into an alternating current (a.c.) signal.

(i) Describe how the loudspeaker in the radio converts this a.c. signal into a sound wave. (4)

(c) A scientist measures the count rate at different distances from the technetium source. The graph shows how the count rate changes with distance from the technetium source.

The scientist suggests that the relationship between the count rate and distance is

$$(\text{distance})^2 \times \text{count rate} = \text{constant}$$

Use data from the graph to determine whether these results support this relationship.

11 This question is about satellites and their orbits.

(a) (i) State a difference between an artificial satellite's orbit and a planet's orbit. (1)

(ii) State a similarity between an artificial satellite's orbit and a moon's orbit. (1)

(b) KALPANA-1 was an artificial satellite used to monitor the weather.

(i) The diagram shows the orbit of the satellite.

KALPANA-1 has an orbital speed of 3.1 km/s and completes one orbit in 24 hours.

Calculate the height of KALPANA-1's orbit above the Earth's surface.

[radius of Earth = 6400 km]

(4)

height above surface = km

- (ii) The Doppler effect occurs when there is relative motion between the source of waves and the observer of the waves.

Explain how the Doppler effect causes a change in the observed frequency of the waves.

(3)

- (iii) Suggest why the radio waves from KALPANA-1 detected on the Earth's surface are **not** affected by the Doppler effect.
