--	--	--	--

**Time** 1 hour 20 minutes

**Paper**  
**reference**

**WBI16/01**

**Biology**

**International Advanced Level**

**UNIT 6: Practical Skills in Biology II**

**You must have:**

Scientific calculator, ruler, HB pencil

Total Marks

### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- **Show all your working in calculations and include units where appropriate.**

### Information

- The total mark for this paper is 50.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- Good luck with your examination.

**Answer ALL questions.**

**Write your answers in the spaces provided.**

- 1 The photograph shows a brine shrimp, *Artemia salina*.

© Nature Picture Library / Alamy Stock Photo

Magnification  $\times 2.0$

Brine shrimps are invertebrate animals that live in salt lakes. They feed on algae and reproduce by producing eggs.

When the conditions are favourable, the eggs hatch into brine shrimps.

A student observed that eggs hatched faster when calcium ions were added to the saltwater.

(b) (i) State **two abiotic** variables, other than the independent variable, that could affect this experiment.

(2)

First variable.....

Second variable.....

(b) (ii) Choose **one** of the variables you have identified in (b)(i).

Explain how this variable could be controlled.

Describe what effect it could have on the results if it is not controlled.

(2)

Variable .....

How this variable is controlled.

.....  
.....

Effect it could have on the results if it is not controlled.

(c) Calcium ions can bind to some enzymes.

Explain how the presence of calcium ions can affect the time taken for brine shrimp eggs to hatch.

2 The photograph shows switchgrass, *Panicum virgatum*.

© Florapix / Alamy Stock Photo

This plant is grown on many farms in North America. It produces a large biomass that can be used to generate electricity or food for farm animals.

A scientist investigated the biomass produced by two different varieties of switchgrass, Almo and Kanlow.

One field was divided into twenty plots of the same area.

Ten of these plots were planted with seeds of the variety Almo and the other ten plots were planted with seeds of the variety Kanlow.

All the plots were planted with the same density of seeds.

All the plots were harvested by machine on the same day.

This was repeated each year for seven years.

The notebook shows the results of this investigation.

Almo biomass  $\times 10^3$  kg per  
hectare

year one 20.1

year two 19.2

year three 14.2

year four 11.4

year five 11.8

year six 13.6

year seven 14.0

Kanlow biomass  $\times 10^3$  kg per  
hectare

year one 15.5

year two 22.2

year three 14.4

year four 11.4

year five 12.6

year six 15.2

year seven 16.5

(a) Write a suitable null hypothesis for this investigation.

(1)

(b) (i) State the meaning of the term **biomass**.

(1)

(ii) When burnt, switchgrass biomass releases  $14.25 \text{ MJ kg}^{-1}$  of energy.

Calculate the energy released from burning all the Kanlow biomass produced in year four.

Give your answer to **two** significant figures, using standard form.

(2)

..... MJ

(iii) Draw a suitable table to display the results of this investigation. Label the median for both varieties of switchgrass.

(d) The scientist used a Mann-Whitney  $U$  test to analyse the data.

The following formulae were used.

$$U_1 = R_1 - \frac{n_1(n_1 + 1)}{2}$$

$$U_2 = R_2 - \frac{n_2(n_2 + 1)}{2}$$

Where  $n_1$  and  $n_2$  are the number of samples of each switchgrass.

The scientist calculated the value of  $R_1 = 57.5$  and  $R_2 = 47.5$

The value of  $U_1 = 29.5$

(i) Calculate the value of  $U_2$ .

(2)

Answer .....

(ii) The table shows the critical value of  $U$  for probability value of  $p = 0.05$ .

For the difference to be significant, the smallest calculated  $U$  value has to be equal to, or less than, the critical value shown in the table.

Probability value  $p = 0.05$

		$n_2$							
		5	6	7	8	9	10	14	15
$n_1$	5	2	3	5	6	7	8	13	14
	6	3	5	6	8	10	11	17	19
	7	5	6	8	10	12	14	22	24
	8	6	8	10	13	15	17	26	29
	9	7	10	12	15	17	21	31	34
	10	8	11	14	17	20	23	36	39
	14	13	17	22	26	31	36	55	59
	15	14	19	24	29	34	39	59	64

Deduce the conclusion that can be drawn from this investigation.

Use your graph and the information in the table to support your answer.

3 The photograph shows a sea slug of the genus *Aplysia*, a marine animal.

external  
gills

© walkdragon/Shutterstock

Magnification  $\times 1.0$

*Aplysia* can be kept in tanks in a laboratory.

*Aplysia* absorb oxygen using external gills.

When the gills are touched, the gills are completely withdrawn into the body by a reflex action.

The gills re-emerge after some time.

The student formed the following hypothesis:

The more frequently the gills are touched the less time it takes them to re-emerge.

Plan an investigation to find evidence to support or reject this hypothesis.
